

Disconnect GK meters.txt

I'm a bit late to this topic but for anyone interested, I have disabled the mechanical meters on all my Game King / I-game machines by cutting the bright solid orange wire leading to the meters. No jumper needed (I use a couple of grey wire-nuts) and have never had a tilt with this method for either 3902 or 044.

That works too, it removes the +25VDC supply to the meters. You have to leave the connector on the meters or you will lose the loop between pins 9 and 10 which will give you the meters disconnected error.
